

What I done today

- Create 6 social media messages for last week's and one social media design
- 6 game ideas
- Create a GitHub repository for my daily task
- Responsive web design
- New layout design for The first prototype
- Find 3 templates for the first prototype

What I learn today

- Create a GitHub repository and share with others
- Adding social media hashtag did not bump up the view and interaction rate, maybe try to comment on other's posts and repost
- Have a template and show client but not showing source of the website

What I find difficult

- Responsive web design is very difficult, some element worked and some did not
